Commercio.Network

eKYC (KNOW YOUR CUSTOMER) ONBOARDING WITH THE COMKYC BLOCKCHAIN PROTOCOL

Commercio.network the Digital Transformation Blockchain™ that allows companies to Solve:

- **eID** solve the **paternity** problem
- **eSignature** solve the **validity** problem
- **eDelivery** solve the **integrity** problem
- **eKYC** solve the **onboarding** problem.

WHY eKYC

IMPROVE YOUR CUSTOMER ONBOARDING EXPERIENCE
Automating the KYC process by obtaining information straight from end-customers' banks instead of asking them to upload ID/Passport documents.

REDUCE USER DROP-OUT
Making it easier for end-customers to sign up and start using a company service, increases the chances of them successfully completing the process.

GET PRE-VERIFIED INFORMATION
Since user data originates from the users' banks , if the verifier trusts the bank then user data can be trusted eliminating any further verification burden.

Go to https://Commercio.network for more info

COMKYC COMPONENT TECHNICAL FEATURES

Feature 1 Register on Commercio.app
You register on our online web app, we confirm your **email** and **phone number** and you login as user. We now have a cloud SSI Agent on the Commercio hosted Wallet platform.

Feature 2 Become a Member
You now purchase one of our three API Memberships available and join the Commercio.network blockchain as distributor, developer or as end user.
You will establish a Connection to Commercio SSI Agent (web)

Feature 3 Perform a SEPA payment
You perform a SEPA payment with any bank (or any regulated money institution) in order to receive a eKYC verifiable credential

Feature 4 Include your DID in the Payment Memo
Here you are redirected to your Bank Web site where we perform the Payment. You MUST include your DID:COM public address in the money transfer memo field in order to request and receive a eKYC verifiable credential offer from Commercio

Feature 5 Accept The ComKYC Verifiable Credential
You can now Accept The ComKYC Verifiable Credential (web) and use as a login anywhere they trust your bank's KYC account anchor.

INTEROPERABILITY

VCA Verifiable Credential Authority
A platform to Issue and Verify certified attributes and claims, under different formats, and for any SSI system

SSI4DTM - eIDAS Bridge
A platform to execute any cross-border transactions such as NDAs, contracts, bids, etc. between eIDAS trusted digital Identities

GAYA Agreemets
An agreements platform that allows anyone to remotely meet via a video conference and eSign contracts with a public Notary that legally certify the party identities and the deeds
